

**G-ENIAL™ FLO X**  
LIGHT-CURED RADIOPAQUE FLOWABLE COMPOSITE

For use only by a dental professional in the recommended indications.

#### RECOMMENDED INDICATIONS

- Liner or base
- Blocking out undercuts
- Repair of (in) direct aesthetic restorations, temporaries and bridge, defect margins when margins are not enamel
- Sealing hypersensitive areas
- Fixing sealant
- Direct restorative for Class II, III, IV, and V cavities including small cavities which require high flowability.

#### CONTRAINDICATIONS

Avoid use of this product in patients with known allergies to methacrylate monomer or methacrylate polymer.

#### Operation

- Preparations
  - Hold the syringe upright and remove the cap by turning counter-clockwise.
  - Properly and securely attach the dispensing tip to the syringe by turning clockwise.
  - Place the light protective cover until use.

Note:

Take care not to attach the dispensing tip too tightly. This may damage its screw. In order to ensure a tight connection make sure that the threads are free of remnant material.

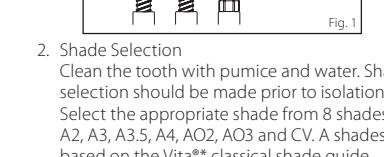

Fig. 1

2. Shade Selection  
Clean the tooth with pumice and water. Shade selection should be made prior to isolation.

Select the appropriate shade from 8 shades of A1, A2, A3, A5, A4, A02 and C. A shades are based on the Vita® "classical shade guide".

\*Vita® is a registered trademark of VITA Zahnfabrik, Bad Säckingen, Germany.

#### Cavity Preparation

Prepare cavity using standard techniques. Dry by gently blowing with oil free air. Rubber dam is recommended to isolate prepared tooth from contamination with saliva, blood or fluid.

Note:

For pulp capping, use calcium hydroxide.

#### Bonding

For bonding G-Enial Flo X etch and/or dentine, use a light-cured bonding system such as G-Enial® Bond, G-Premio Bond, G-BOND. Follow manufacturer's instructions.

#### Placement of G-Enial Flo X

- Remove cover from the dispensing tip.

Note:

Prior to syringe material into the cavity, make sure to check the following.

1. Dispensing tip is securely attached to the syringe.

2. Any possible air from the dispensing tip is removed by gently pushing forward the plunger with the tip pointing upwards until material reaches the opening of the tip (Fig. 2).

3. Place the dispensing tip as close as possible to the prepared cavity, and slowly push the plunger to syringe material. Alternatively, dispense material onto a mixing pad and transfer to the cavity using a suitable instrument.

Note:

a. If plugged, remove the dispensing tip and extrude a small amount of material directly from the syringe.

b. Minimize exposure to ambient light.

Ambient light can shorten the material's shelf life.

c. After use, immediately remove and dispose the dispensing tip and tightly close the syringe with the cap.

#### Clinical Hint

In order to inject effectively, use the surface tension of the material to ensure uniformity across the entire surface of the tooth preparation. Once the required amount has been injected, release the pressure on the plunger and withdraw the syringe in a direction perpendicular to the surface. This will allow the material to separate from the dispensing tip and provides a smooth surface over the restoration.

#### Light Curing

Light cure the G-Enial Flo X using a light curing unit. Keep light guide as close as possible to the surface. Refer to the following chart for Irradiation Time and Effective Depth of Cure.

Shade	Irradiation time [sec]	[Halogen] LED (100 mW/cm²)	[High power] LED (More than 100 mW/cm²), e.g. GC-D-Light Pro
A1, A2, A3	20 sec	2.0 mm	
A3, A4, CV, A02, A03	15 mm		

Note:

1. Material should be placed and light cured in layers. For maximum layer thickness, please consult above table.

2. Lower light intensity may cause insufficient curing or discoloration of the material.

#### Finishing and Polishing

Finish and polish using standard techniques.

#### SHADES

A1, A2, A3, A5, A4, A02, A03 and CV

#### STORAGE

Recommended for optimal performance, store in a cool and dark place (-4° - 25° / 39° - 77°F) away from high temperatures or direct sunlight.

(Shelf life: 3 years from date of manufacture)

#### PACKAGES

1. Syringe 3.0 (2.0mL), 20 dispensing tips (plastic type), 1 light protective covers

Dispensing tip package:

2. 30 dispensing tips (plastic type), 2 light protective covers

3. 30 dispensing tips (needle type), 2 light protective covers

#### CAUTION

1. In case of contact with oral tissue or skin, remove immediately with cotton or a sponge soaked in alcohol. Flush with water. To avoid contact, a rubber dam and/or occlusal buffer can be used to isolate the operation field from the skin or oral tissue.

2. In case of contact with eyes, flush immediately with water and seek medical attention.

3. Take care to avoid ingestion of the material.

4. Do not mix with other similar products.

5. Dispensing tips are for single use only. To prevent cross-contamination between patients, do not reuse the dispensing tip. The dispensing tip cannot be sterilized in an autoclave or chemical.

6. Wear plastic or rubber gloves during operation to avoid direct contact with air inhibited resin by moisture.

7. Wear protective eyeglasses during light curing.

8. When curing, use a bonding agent or bonding material, use a dust collector and wear a dust mask to avoid inhalation of cutting dust.

9. Avoid getting material on clothing.

10. In case of contact with unintended areas of tooth or prosthetic appliances, remove with instrument, sponge or cotton pellet before light curing.

11. Do not use G-Enial Flo X in combination with glass ionomer cements and safety eyewear should always be worn.

12. In rare cases the product may cause sensitivity in some people. If any such reactions are experienced, discontinue the use of the product and refer to a physician.

Some products referenced in the present IPU may be classified as hazardous according to GHS.

Allergy information: Please refer to the safety data sheets available at <http://www.geurope.com>. They can also be obtained from your supplier.

#### CLEANING AND DISINFECTION:

MULTI-USE DELIVERY SYSTEMS: to avoid cross-contamination between patients this device requires regular disinfection. Immediately after use inspect device as label for deterioration. Discard device if damaged.

DO NOT IMMERSIVE: thoroughly clean device to prevent drying and accumulation of contaminants. Disinfect with a mid-level registered healthcare-grade infection control product according to regional/national guidelines.

**G-ÄENIAL FLO X**

LIGHT-CURED RADIOPAQUE FLOWABLE COMPOSITE

For use only by a dental professional in the recommended indications.

**RECOMMENDED INDICATIONS**

- Liner or base
- Blocking out undercuts
- Repair of (in)direct aesthetic restorations, temporary crown & bridge, defect margins when margins are in enamel
- Sealing hypersensitive areas
- Fissure sealant
- Direct restorative for Class II, III, IV, I and V cavities including small cavities which require high flowability.

**CONTRAINDICATIONS**

Avoid use of this product in patients with known allergies to methacrylate monomer or methacrylate polymer.

**Operation**

- Preparations
- Hold the syringe upright and remove the cap by turning counterclockwise.
- Promptly and securely attach the dispensing tip to the syringe by turning clockwise.
- Place the light protective cover until use.
- Note : Take care not to attach the dispensing tip too tightly. This may damage its screw. In order to ensure a tight connection make sure that the threads are free of remnant material.

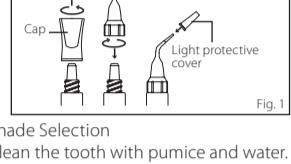

Fig. 1

- Shade Selection

Clean the tooth with pumice and water. Shade selection should be made prior to isolation. Select the appropriate shade from 8 shades of A1, A2, A3, A5, A4, A02, A03 and CV. A shades are based on the Vita®\*\* classical shade guide. \*Vita® is a registered trademark of VITA Zahnfabrik, Bad Säckingen Germany.

3. Cavity Preparation Prepare cavity using standard techniques. Dry by gently blowing with oil free air. Rubber dam is recommended to isolate prepared tooth from contamination with saliva, blood or sucus fluid. Note :

For pulp capping, use calcium hydroxide. 4. Bonding treatment For bonding G-äenial Flo X to enamel and/or dentine, use a light-cured bonding system such as G-äenial Bond, G-Premio BOND, G-BOND. Follow manufacturer's instructions.

- Placement of G-äenial Flo X

1) Remove cover from the dispensing tip.

Note : Prior to syringe material into the cavity, make sure to check the following.

- Dispensing tip is securely attached to the syringe.
- Any possible air from the dispensing tip is removed by gently pushing forward the syringe plunger with the tip pointing upwards until material reaches the opening of the tip (Fig. 2).

2) Place the dispensing tip as close as possible to the prepared cavity, and slowly push the plunger to syringe material. Alternatively, dispense material onto a mixing pad and transfer to the cavity using a suitable instrument.

Note :

- If plugged, remove the dispensing tip and extrude a small amount of material directly from the syringe.
- Minimize exposure to ambient light. Ambient light can shorten the manipulation time.

c) After use, immediately remove and dispose the dispensing tip and tightly close the syringe with the cap.

**Clinical Hint**

In order to inject effectively, use the surface tension of the material to ensure uniformity across the entire surface of the restoration during build up. Once the required amount has been injected, release the pressure on the plunger and withdraw the syringe in a direction perpendicular to the surface. This will allow the material to separate from the dispensing tip and provides a smooth surface over the restoration.

**6. Light Curing**

Light cure the G-äenial Flo X using a light curing unit. Keep light guide as close as possible to the surface. Refer to the following chart for Irradiation Time and Effective Depth of Cure.

Irradiation time	20 sec. (Halogen/LED) (700 mW/cm²)	10 sec. (High power LED (more than 1200 mW/cm²), e.g. GC-D-Light Pro)
Shade	2.0 mm	
A1, A2, A3	1.5 mm	

Note :

- Material should be placed and light cured in layers. For maximum layer thickness, please consult above table.
- Lower light intensity may cause insufficient curing or discoloration of the material.

**7. Finishing and Polishing**

Finish and polish using standard techniques.

**SHADES**

A1, A2, A3, A5, A4, A02, A03 and CV

**STORAGE**

Recommended for optimal performance, store in a cool and dark place (4 - 25°C / 39.2 - 77.0°F) away from high temperatures or direct sunlight.

(shelf life : 3 years from date of manufacture)

**PACKAGES**

1. Syringes 3.6g (2.0ml), 20 dispensing tips (plastic type).

2. Light protective cover

3. 20 dispensing tips (plastic type), 2 light protective covers

3. 30 dispensing tips (needle type), 2 light protective covers

**CAUTION**

1. In case of contact with oral tissue or skin, remove immediately with cotton or a sponge soaked in alcohol. Flush with water. To avoid contact, a rubber dam and/or cocoa butter can be used to isolate the operation field from the skin or oral tissue.

2. In case of contact with eyes, flush immediately with water and seek medical attention.

3. Take care to avoid ingestion of the material.

4. Do not mix with other similar products.

5. Dispensing tips are for single use only. To prevent cross contamination between patients, do not reuse the dispensing tip. The dispensing tip cannot be sterilized in an autoclave or chemical.

6. Wear plastic or rubber gloves during operation to avoid direct contact with air inhibited resin layers in order to prevent possible sensitivity.

7. Wear protective eye glasses during light curing.

8. When polishing the polymerized material, use a dust collector and wear a dust mask to avoid inhalation of cutting dust.

9. Avoid getting material on clothing.

DE

**G-ÄENIAL FLO X**

LICHTHÄRTENDES RADIOPAKES FLISSFÄHIGES

KOMPOSIT

Nur von zahnmedizinischen Fachpersonal für die genannten Anwendungsbereiche zu verwenden.

**EMPFOLHENE INDIKATIONEN**

1. Unterfüllung oder Stumpfaufbau

2. Ausblocken von Unschneitten

3. Reparatur von direkten, ästhetischen Füllungen, temporäre Kronen und Brücken, Zahnhalsdefekte, wenn der Zahnhals aus Schmelz besteht

4. Versiegelung hypersensitiver Bereiche

5. Fissurenversiegelung

6. Direktes Füllungsmaterial für Klassen II, III, IV, I und V

Kavitäten inklusive kleiner Kavitäten die eine hohe Fließfähigkeit erfordern.

**GEGENANZEIGEN**

Dieses Produkt darf nicht an Patienten verwendet werden, die eine Allergie gegen

Methylacrylatmonomer oder Methylacrylatpolymer haben.

**Gebrauchsanweisung**

## 1. Vorbereitung

- Die Spritze aufrecht halten und die Kappe durch Drehen entgegen des Uhrzeigers entfernen.

- Die beigelegende Dispensonspitze durch Drehen im Uhrzeigersinn anbringen.

- Die Dispensonspitze durch die Lichtschutzhülle vor Einfallstein schützen.

Anmerkung:

Die Dispensonspitze nicht zu fest anziehen, da sonst das Gewinde beschädigt werden kann.

Um eine dichte Verbindung zu garantieren, vergewissern Sie sich, dass das Gewinde von Restmaterial ist.

Desinfektionsmittel mit einem feste

Zugang verhindern.

Note :

- a) If plugged, remove the dispensing tip and extrude a small amount of material directly from the syringe.

- b) Minimize exposure to ambient light.

Ambient light can shorten the manipulation time.

- c) After use, immediately remove and dispose the dispensing tip and tightly close the syringe with the cap.

**Clinical Hint**

In order to inject effectively, use the surface tension of the material to ensure uniformity across the entire surface of the restoration during build up. Once the required amount has been injected, release the pressure on the plunger and withdraw the syringe in a direction perpendicular to the surface. This will allow the material to separate from the dispensing tip and provides a smooth surface over the restoration.

**6. Light Curing**

Light cure the G-äenial Flo X using a light curing unit. Keep light guide as close as possible to the surface. Refer to the following chart for Irradiation Time and Effective Depth of Cure.

Irradiation time	20 sec. (Halogen/LED) (700 mW/cm²)	10 sec. (High power LED (more than 1200 mW/cm²), e.g. GC-D-Light Pro)
Shade	2.0 mm	
A1, A2, A3	1.5 mm	

**Note :**

- Material should be placed and light cured in layers. For maximum layer thickness, please consult above table.
- Lower light intensity may cause insufficient curing or discoloration of the material.

**7. Finishing and Polishing**

Finish and polish using standard techniques.

**SHADES**

A1, A2, A3, A5, A4, A02, A03 and CV

**STORAGE**

Recommended for optimal performance, store in a cool and dark place (4 - 25°C / 39.2 - 77.0°F) away from high temperatures or direct sunlight.

(shelf life : 3 years from date of manufacture)

**PACKAGES**

1. Syringes 3.6g (2.0ml), 20 dispensing tips (plastic type).

2. Light protective cover

3. 20 dispensing tips (plastic type), 2 light protective covers

3. 30 dispensing tips (needle type), 2 light protective covers

**CAUTION**

1. In case of contact with oral tissue or skin, remove immediately with cotton or a sponge soaked in alcohol. Flush with water. To avoid contact, a rubber dam and/or cocoa butter can be used to isolate the operation field from the skin or oral tissue.

2. In case of contact with eyes, flush immediately with water and seek medical attention.

3. Take care to avoid ingestion of the material.

4. Do not mix with other similar products.

5. Dispensing tips are for single use only. To prevent cross contamination between patients, do not reuse the dispensing tip. The dispensing tip cannot be sterilized in an autoclave or chemical.

6. Wear plastic or rubber gloves during operation to avoid direct contact with air inhibited resin layers in order to prevent possible sensitivity.

7. Wear protective eye glasses during light curing.

8. When polishing the polymerized material, use a dust collector and wear a dust mask to avoid inhalation of cutting dust.

9. Avoid getting material on clothing.

**Klinischer Hinweis**

Nutzen Sie die Oberflächenspannung des Materials aus, um eine optimale Oberfläche der Restauration zu erlangen. Nach dem Applizieren der Materialmenge den Druck vermindern und die Dispersionsspitze in einer Drehbewegung von der Oberfläche entfernen.

2) Placer sprotespiden så tätt på kaviteten som möjligt, och långsamt inför i injicert materialet. Alternativt, tryck materialet ud på en blandeblock och överflyt det därefter till kavitenet med passande instrument.

Note :  
 A. Ved stoppelse, färn spiden och doser direktre fra sprøten.  
 B. Minimer kontakten med omgivende lys. Lys kan forstørre arbejdstdist.

C. Efter endnu et gennemført fjerens sprotespiden og sprøten pæsætter skruelæg.

**Klinisk tip**  
For optimalt applicerings, anvendes materialets overfladeespanding under opbygningen for at opnholde en ensartethed på hele overfladen af fyldningen. Så snart den nødvendige mængde materialet er injicert, tages tryk fra stømplet og sprøjten fernes vedkæret fra overfladen. Dette får materialet til at separere fra sprotespiden og legge sig som en jævn overflade på restaureringen.

6. Lyshærdning  
Lydhard G-ænial Flo X vha en hærdelampe. Hold hærdelampen tæt på materialet. Der henvises til følgende skema med hærdelader og effektive hærdedybder.

Hærdelader	20 sek. (Halogen / LED) (700 mW/cm <sup>2</sup> ) (Halogen / LED) (mere 1200 mW/cm <sup>2</sup> , F.eks. GC-D-Light Pro)
Fare	10 sek.
A1, A2, A3	2,0 mm

A1,3,4,CV,AO2,AO3  
1,5 mm

Note :  
 1. Materialet bør placeres og lyshærdes i lag. For maximum lagteknik, se tabellen ovenfor.  
 2. For lav lysintensitet kan forårsage forskellig polymerisering, eller muligvis senere misfarvning af materialet.

7. Konturering og polering  
Form og poler ved anvendelse af standardteknik.

**FARVER**  
A1, A2, A3, A4, AO2, AO3 og CV

**OPBEVARING**  
For optimalt vejravne anbefales opbevaring kaldt og mørkt (4-25°C / 39,2-77°F). Undgå høj temperatur og direkte sollys. (Holdbarhed : 3 år fra produktionsdato)

**PAKNING**  
1. Sprøte 3,6g (2,0ml), 20 sprøtespider (plastik), 1 beskyttelseshætte til sprøtespiden  
Sprøtespider :  
2. 30 sprøtespider (plastik), 2 lys  
beskyttelseshætte til sprøtespider  
3. 30 sprøtespider (metal), 2 lys beskyttelseshætte til sprøtespider

**BEMÆRK**  
1. Hæftedele af hærdkontakt eller kontakt med oralt væv, fjernes materialet med vætpellet eller svamp med alkohol. Der skyldes grundigt efter ved vand. For at undgå kontakt, kan kofferdamer eller kakerolmæssige pruges til isolering af arbejdsmønde og oral væv.  
2. Hæftedele af materialet kommer i kontakt med øjene, skyld grundigt med vand og sæg lægehjælp, hvis opmærksom på at patienten ikke sluger materialet.

3. bland ikke materialet med andre lignende produkter, sprøjtespidserne vil engangsbrug. For at undgå kryskontaminering mellem patienter, genbrug ikke sprøjtespiderne. Sprøjtespiderne kan ikke autoklaves, steriliseres eller renses kemiisk.

4. brug handsker under brug af materialet for at undgå kontakt med resin, da dette kan forårsage allergisk reaktion, brug beskyttelsesbriller under lyshærdning.

5. ved polering af materialet, brug stumpeskive for at undgå inhalering af støvtørstikker.

6. undgå at få materialet på tojet, der kan forårsage hærdning.

7. tilfældigt af isolering af støvtørstikker.

8. ved polering af materialet, brug stumpeskive for at undgå inhalering af støvtørstikker.

9. undgå at få materialet på tojet, der kan forårsage hærdning.

10. tilfældigt af kontakt på ønskede områder, fjern straks med instrument, eller bomuldsplættet for lyshærdning.

11. tilfældigt af kontakt med øjene, skyld grundigt med vand og sæg lægehjælp, hvis opmærksom på at patienten ikke sluger materialet.

12. bland ikke materialet med andre lignende produkter, sprøjtespidserne vil engangsbrug. For at undgå kryskontaminering mellem patienter, genbrug ikke sprøjtespiderne. Sprøjtespiderne kan ikke autoklaves, steriliseres eller renses kemiisk.

13. bortskaffelse af reproduktorer skal ske i henhold til lokale regulærer.

14. sjældent tilfælde kan en sensibilisering fra produktet opstå. Sæfrent der opstår allergisk reaktion, skal brugen af produktet indstilles og patienten henvises til enge læge.

15. Personlige væremidler (PPE) såsom handsker, mundbind og beskyttelsesbriller skal altid bæres.

Nogle produkter, som er beskrevet i IFU, er evnt. klassificerede som farlige i hht GHS. Det altid op på alle arbejdsgivningsmæssige anvisninger som kan findes på : <http://www.egceurope.com>. Det kan altid rekvireres hos dit depot.

**RENGØRING OG DESINFETION**  
APPLICERINGSYSTEM TIL FLERGANGSBRUG: For at undgå kryskontaminering mellem patienterne, skal disse enheder desinficeres på mellemnevnt. Efter anvendelse ispecitera ommedelbart for problem. Defekt enhed skal kasseres.

MÅ IKKE LÆGSES I DESINFektionsvæsker. Rengør enheden omhyggeligt med et tørrenælget. Det må ikke være smuds tilbage på enheden.

Desinficer produktet på mellemnevnt og følg de nationale retningsslinjer for dette.

Revideret senest: 08/2019

Læs bruksanvisningen noga før anvendning.

**G-ÆNIAL FLO X**  
LYSHARDENDE RÖNTGENKONTRASTERANDE  
FLYTANDE KOMPOSIT  
Produkten ska endast användas av professionella yrkesutövare inom de rekommenderade indikationerna.

**REKOMMENDERADE INDIKATIONER**

1. Liner eller bas  
2. Blocking af underskærm  
3. Reparation af (in) direkta estetiska restaurerationer, temporära kronor och broar, defekter i emalen vid fyllningsgränser  
4. Forsigelse af hypersensitive ytor  
5. Fissuraforsigelse  
6. For direkta fyllningar i klass II, III, IV, och V kaviteter, inklusive små fyllningar där en komposit med hög flytbarhet är önskvärd att använda.

**KONTRAINDIKATIONER**  
Undantag till användningen produkten på patienter med känd allergi mot metakrylatmonomerer eller metakrylatpolymere.

**ANVÄNDNING**  
1. Häll spruten uppått och avlägsna hatten genom att vrida den motols.

2. Sätt ommedelbart och säkert på spetsen på sprutan genom att vrida speten medols.

3. Sätt på ljusskyddet innan produkten ska användas.

Notera:  
Se till att inte dra fast speten för hårt på sprutan. Det kan medföra att gängorna förstör. För att säkerställa att speten sitter som den ska, se till att materialet inte finns kvar på sprutans spets.

Fig. 1

2. Att välja färg  
Rengör tanden med pimpest och vatten. Färgvattnet ska göras innan tanden törläggs och isoleras. Välj ut den passade färgen från av de 8 färgerna som finns A1, A2, A3, A5, A4, AO2, AO3 och CV. Färgerna är baserade på Vita® klassiska färgskala.

Tip: Vita® är ett registrerat varumärke av VITA Zahnfabrik, Bad Säckingen, Tyskland.

3. Kavitterspelare  
Prepara kavitten på sedvanlig sätt. Torrblästra med oljefri luft. Bruk av kofferdamer och isolering i syfte att förebygga kontamination av saliv, blod och vätskar från sulcus.

Notera:  
Vid pulpaläsioner, använd calciumhydroxid.

4. Bonding  
For att bonda G-ænial Flo X till emalj och/eller

dessutom med annan.

5. Aplicering  
1. Om avena vertical, remova en tampa med sprutspetsen och lägg den i en annan tampa.

2. Sätt till en annan tampa och lägg den i en annan tampa.

3. Sätt till en annan tampa och lägg den i en annan tampa.

4. Sätt till en annan tampa och lägg den i en annan tampa.

5. Sätt till en annan tampa och lägg den i en annan tampa.

6. Sätt till en annan tampa och lägg den i en annan tampa.

7. Sätt till en annan tampa och lägg den i en annan tampa.

8. Sätt till en annan tampa och lägg den i en annan tampa.

9. Sätt till en annan tampa och lägg den i en annan tampa.

10. Sätt till en annan tampa och lägg den i en annan tampa.

11. Sätt till en annan tampa och lägg den i en annan tampa.

12. Sätt till en annan tampa och lägg den i en annan tampa.

13. Sätt till en annan tampa och lägg den i en annan tampa.

14. Sätt till en annan tampa och lägg den i en annan tampa.
